

Tactical Planning

Strategic Planning vs. Tactical Execution

The development of an effective plan is achieved through more detailed understanding of its execution, seeking more exact distinctions of each outcome sought

Comprehensive Planning tool allowing development of over 2,000 execution metrics

Designed to achieve short-term objectives, **Tac-DX** is an executive level management application that provides situational awareness to support effective decision making

Tac-DX supports operational integration; data management & analysis, collaboration, communication, process evaluation & numerous other diverse management functions

Tac-DX supports parallel, synchronous & cross functional operational planning

Tactical Execution is managed by **P-Metrx** through automated data alignments

- Defined outcome objectives, individual responsibilities, programmed timelines
- **Tac-DX** dissects & re-organizes Strategic Plans into short term actions / strategies

Tac-DX supports well defined operational capabilities possessing quantified values

Classification of the operational environment allows an ability to cross-reference with different functions / lines of business using standardized performance measures

- Achieved through standardized descriptions of common functional operations:
 - *Primary & supporting goals & objectives*
 - *Performance indicators related to objectively defined outcomes*
 - *Classification of common operational characteristics*
 - *Classification of dominate customer groups*
 - *Classification of dominant resource characteristics*
 - *Classification of state / federal regulatory requirements*

Performance Outcomes are characterized as how success is recognized & evaluated

Each strategy is usually comprised of a myriad of tactics involving numerous staff / department participants, all working toward well defined common outcome goals

- Operational control is realized through greater situational awareness, ensuring data integrity, accountability & efficient processes for tactical execution

Tac-DX defines critical projects & activities in support of a well defined Strategic Plan

The execution of the Strategic Plan is achieved through a myriad of quantified Tactical outcomes, analyzed as an aggregate to show progress overtime

Tactical efficiency is the Command & Control of each objective to completion
